

DOOR FINISHING INSTRUCTIONS

Your **Lynden Door** is primed with a very durable polyester paint primer. We recommend that you apply a final coat, either to match your house, or a finish coat of a white of your choice to give lasting protection of your investment. Do not use dark coloured paint as sun exposure can cause excessive heat build-up (may void warranty). We suggest the following procedure;

1. Wipe the door surface with mineral spirits or denatured alcohol to remove all surface contaminants.
2. Sand the entire painted surface lightly with 220 grit sandpaper.
3. Wipe the door surface a second time, as in Step 1.
4. Wipe door surface with a tack cloth.
5. Paint the door with a good quality Alkyd or an oil base exterior paint. Use a good quality brush or dense foam roller. A paint sprayer works well also if space and conditions allow. Paint both sides and all four edges.
6. Painting the door on the flat using sawhorses prevents the paint from running and makes the job much easier.

IMPORTANT: Be certain the surface to be painted is dry and both the surface and paint approximately 19 degrees Celsius.
